Attention: [redacted] Contracting Officer

Subject: [redacted] Proposal Dated 16 August 2010

Reference: [redacted] Request for Proposal (RFP) dated 25 January 2010
[redacted]

Enclosure: 1) Proposal (Volume 1- Technical and Volume 2 - Cost)

Dear [redacted]

H/C is happy to provide its response to the Sponsors referenced (a) RFP for effort to be added under the referenced [redacted] contract. Our specific assumptions used in preparing this proposal are included in both the Technical and Cost volumes.

The Consolidated Materials List (CML) for this effort currently is not finalized (non-auditable). Our staff is working to generate an fully auditable CML which we will provide during negotiations.

As requested this proposal shall remain valid for a period of sixty (60) days. Harris reserves the right to revise, update, or extend the validity of this proposal should the proposed rates change prior to negotiations.

Should you require further information please do not hesitate to contact the undersigned at [redacted]
[redacted]

Very truly yours,

[redacted]

■ **Tower/Sector data.**

1. is generated by the network for network purposes regardless of a LE order.
2. is necessary to Provision of Service & a call cannot be processed without it.
3. exists in the network as a **RECORD or Other Information** prior to its being obtained by LE.
4. NON-Content data; not substance of a communication.
5. is delivered only at the beginning and end of calls per CALEA J-Std

WITT

Wireless Intercept and Tracking Team

- **Qualified Government Privilege in Non-disclosure based on *Roviaro v. United States*, 353 U.S. 53 (1957):** disclosure of identity (and testimony) of informant.
 - Generally technique, type of device, location of install, etc. is protected
 - unless Defense can establish disclosure is necessary to defense, i.e., no other/adequate means to cross-examine/test evidence; if so:
 - then Balancing of interests
 - [REDACTED]
 - see also Jayme S. Walker "The qualified privilege to protect sensitive investigative techniques from disclosure," LEB Vol 69 NO.5 at 26 (May 2000).

b5
b7E

WTT

Wireless Intercept and Tracking Team

- **Compare, United States v. Van Horn, 789 F.2d 1492 (11th Cir.), cert. denied, 479 U.S. 854 (1986)** (concealed microphone in office, defendant sought information about location of device claiming necessary to demonstrate that voices on tape could have been distorted by way mic was hidden and the distortion led to misidentification of the voice), recognized a qualified government privilege not to disclose sensitive investigative techniques.

- **With United States v. Foster, 986 F.2d 541, 543 (D.C. Cir. 1993)** (defendant sought location of observation post: officer's observation of drug transaction was key evidence implicating defendant; surveillance not taped or photographed, so no alternative evidence for jury to examine to determine whether surveillance post provided clear view from which officer could make accurate identification of defendant).

b5

WIT

Wireless Intercept and Tracking

U.S. v. Garey, 2004 WL 2663023 (M.D. Ga. Nov. 15, 2004)

- Defendant sought nature & details of pen register used to determine the geographical location of a cellular phone
- Court found the information protected by qualified investigative techniques privilege & national security privilege
- Balanced government's interest in maintaining privilege with Defendant's need for the information
- Defendant had the Product of the Surveillance: the cellphone used in making threatening calls was found in defendant's house during search of residence;
 - Defendant did not need to know how the technology traced the geographic location of the phone.
 - locating the phone in the residence confirmed the accuracy of the geographic surveillance;
- Moreover, Defendant could challenge the technology used to establish that phone found in residence was the one that actually made the criminal calls.

1 INTRODUCTION

This document serves as the instrument for the Mobile Computing Security Program to identify requirements and assess risk, with the objective of providing an approval-to-operate. The information required for this assessment includes, but is not limited to, a complete scope of need, justification, concept of operations, technical specifications, configuration management and residual risk relative to the device being placed into service. Once completed, and if residual risk is deemed acceptable, an official EC will be generated granting a Security Management Plan (SMP) for those device(s) described within, in the manner set forth in the concept of operations. Attachments 1 and 2 are "living" documents. That is they are updated each time there is a change in the configuration, or when new devices are fielded under this SMP. Attachment 1 is the Configuration Management control document that lists the specific applications in use under this SMP. Attachment 2 is a complete listing of all devices fielded under this SMP.

2 MISSION BACKGROUND

8 POINTS OF CONTACT

The ISSM has approval authority for the [redacted] and is responsible for the life cycle system security. Significant changes in configuration or usage will be submitted to the ISSM by the ISSO for approval.

b6
b7C
b7E

Information Systems Security Manager [redacted]

The ISSO is responsible for day-to-day oversight of the [redacted]. He is responsible for engineering, development, configuration management and ensuring that the program security requirements are met. The ISSO also maintains an up-to-date inventory of all [redacted] contained within this OP plan and to report any:

- o Loss.
- o Changes in configuration or usage
- o Incremental/decremental changes to the baseline to the PSO and ISSM.

With [redacted] Information Systems Security Officer(s) [redacted]
[redacted]

b6
b7C
b7E

Note: In the event that an ISSM is not assigned, ISSM duties are the responsibility of the assigned security officer.

9 CONFIGURATION MANAGEMENT

Configuration management is a process that controls and manages changes (i.e., new applications, peripherals, changes in configuration, etc.) to a device or system. By controlling changes made to a system's hardware, software, firmware, and/or documentation, throughout the system/device life cycle, configuration management is a mandatory, integral part of this overall risk management solution. The ISSM and ISSO are responsible for managing this process.

9.1 Incremental Changes

Incremental changes to the baseline may be vetted and approved by the ISSM. Minor changes such as the revision number of an application do not require ISSM approval but are to be tracked by the ISSO in the configuration information periodically provided to the ISSM in the configuration management document illustrated in Attachment 1.

9.2 Security Architecture and Usage Changes

Any changes affecting the security architecture including the manner in which the [redacted] are used or the type of data stored on them may require a renegotiated Security Management Plan (SMP).

Mark:

I omit to inform you that we are shipping to your office a few items that were distributed in the [REDACTED] conference. One of which is a thumbdrive that contained the powerpoint presentation materials which should be helpful to those who couldn't attend the conference but want to know what was covered. I recalled over the course of time that you had reached out to us and asked why you were not successful [REDACTED]
